***Reasons for Allowance***

1. The following is an examiner's statement of reasons for allowance:

Re claims 1, 13, and 14, the claimed combination including the limitations of an abnormality diagnosis apparatus or method comprising an adjustable valve mechanism, an input control signal for varying a moving characteristic of the valve, a physical model to simulate the physical movement of the valve and used to calculate a theoretical value, an observed value, and an abnormality detection portion based on the theoretical and observed values, is not disclosed or rendered obvious over the art of record.

Re claims 6 and 15, the claimed combination including the limitations of an abnormality diagnosis apparatus or method comprising an adjustable valve mechanism, an output control signal, a sensor that measures the phase difference, a computation module that computes the pressure difference between the two pressure chambers in response to the output signal, and a determination section that compares the actual phase difference to the calculated phase difference to determine if an abnormality exists, an observed value, and an abnormality detection portion based on the theoretical and observed values, is not disclosed or rendered obvious over the art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

*Conclusion*

2. The IDS (PTO-1449) filed on 5 October 2005 has been considered. An initialized copy is attached hereto.

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure and consists of 2 patents.

- Ehara (U.S. Patent 6,862,514) discloses a model generating method comparing simulation data to measurement data.

- Yoshiki et al. (U.S. Patent 6,885,976) disclose a fault determining method for a variable valve timing mechanism.
